

Domain Health Report

example.com

Generated on 2026-10-13 — Basic report

Passed: 10 Warnings: 2 Failed: 1 Unknown: 0

Start here

3 issues to fix · 10 checks passed

- SPF (TXT)
- DMARC (TXT)
- TLS certificate

Menus and wording differ per provider — the steps describe the outcome to reach.

DNS (A / AAAA) - **PASS**

This check completed successfully.

Records found: 2.

Nameservers (NS) - **PASS**

This check completed successfully.

Nameservers found: 2.

Mail exchangers (MX) - **PASS**

This check completed successfully.

Mail servers found: 1.

SPF (TXT) - **FAIL**

No SPF record was found, so sending is not restricted.

What to do: Add a TXT record at Cloudflare listing every service that sends mail for this domain. If Google Workspace also handles your outbound mail, a common starting point is: `v=spf1 include:_spf.google.com -all`.

DMARC (TXT) - **WARNING**

The DMARC policy is `p=none`: reports only, without enforcement.

DMARC record: `v=DMARC1; p=none; rua=mailto:dmARC@example.com`

What to do: Once reports look clean, raise `p=none` to `p=quarantine`, then `p=reject`, to actually block spoofing.

DKIM (TXT) - **PASS**

This check completed successfully.

DKIM key found on selector: `resend`.

HTTPS - **PASS**

This check completed successfully.

HTTP status: 200.

HTTP - **PASS**

Plain HTTP redirects to HTTPS, which is the recommended setup.

HTTP status: 200.

TLS certificate - **WARNING**

The certificate expires soon and should be renewed.

Certificate expires in 12 days.

What to do: Renew the certificate — usually an automatic Let's Encrypt job; check that the renewal still runs.

Security headers - **PASS**

This check completed successfully.

Security headers found: 4 of 4.

CAA - **PASS**

This check completed successfully.

CAA records found: 1.

robots.txt - **PASS**

This check completed successfully.

sitemap.xml - **PASS**

This check completed successfully.

Want the complete picture?

The Pro report runs eight more checks on this same domain for €34.90: domain expiry, mail-server blocklists, DNSSEC, MTA-STS, TLS-RPT, HSTS preload readiness, homepage speed and social tags — with the same concrete fixes.

Technical details

DNS provider: Cloudflare

Mail provider: Google Workspace

DMARC record: v=DMARC1; p=none; rua=mailto:dmarc@example.com

DKIM selector: resend

CAA records: 1

Certificate issuer: CN=R11, O=Let's Encrypt, C=US

Certificate expires: 2026-10-24

HTTPS status: 200
